Offi	ice Action Summary		

U.S. Patent and Trademark Office PTO-326 (Rev. 11/00)

Part of Paper No. 22

Application/Control Number: 09/691,811

Art Unit: 2839

Spec page 11, line 21 is unclear.

Claims 42-46 and 15-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gaudenzi in view of LoVasco, Dozier and Japan 2-28990.

See last office action. For article claims 42-46 "single reflow process" limitations defines no structural feature and the "hold down manufactures ... securing of said contact" does not define a distinct limitation. The securement order would not effect structural features of final product in a clear manner. The same product would result with post 58 secured first followed by securement of solder balls 56. Observation would not indicate that the hold down was formed to become secured subsequent to contact securement.

For the method claims, the assertion that the reference hold down 58 could be secured subsequent to the contacts 56 being secured is maintained since in claim 15 the limitation is not tied in with the intended new result. Claim 15 does not clearly require the contact to center during the reflow process or even to be able to do so. It would read on a process where centering is allowed only during placement of the contacts on the pads and not during reflow.

Claim 15 could be amended to include; --the relationship of hold down, post and reflow process being such as to enable the contact to freely move to center on and become secured to the pad during the reflow process while solder used for securing the post remains substantially as liquid--

Claim 15 with such addition together with other present limitations would overcome Gaudenzi which does not teach or suggest such alignment steps during reflow.

Application/Control Number: 09/691,811

Art Unit: 2839

Applicant's arguments filed with the amendment have been fully considered but they are

not persuasive.

See above discussion. Argument on page 4, lines 9-11 is unclear. Since Gaudenzi posts

58 limit movement of substrate 54 on the circuit board on what basis does applicant assert that

solder balls would center on wrong pads or bridge two pads?

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time

policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR

1.136(a) will be calculated from the mailing date of the advisory action. In no event, however,

will the statutory period for reply expire later than SIX MONTHS from the mailing date of this

final action.

Any inquiry concerning this communication should be directed to N. Abrams at

telephone number 308-1729.
